

Datasea hosted the Institute of Automation of the Chinese Academy of Sciences in headquarter and learned from its recent research findings

On October 19, Datasea hosted the Institute of Automation of the Chinese Academy of Sciences (“IACAS”) in the headquarter and learned from its recent research findings and innovation. As part of the mission of Datasea, the company develops smart city solutions, to tackle the security and automation needs and improve the quality of life in the region and beyond. A huge opportunity to better achieve this vision is to pair a research expertise. The IACAS introduced the visual and auditory aspects of iris recognition, voice detection, visual robotics, sensor and algorithms and discussed opportunities to apply these technologies in areas like intelligent manufacturing and security.

Datasea reached a strategic cooperation with Zhongjing Hengji Investment Group

Datasea recently reached a strategic cooperation with Zhongjing Hengji Investment Group, a company specialized in providing solutions in city operation, including city research, city finance, city creation, city industry and city services, and the projects spanning from Beijing, Jiangsu, Sichuan, Hebei, Heilongjiang to Jiangxi. Datasea’s product offerings and proprietary technologies in the fields of 5G messaging, smart city and acoustic intelligence, fit into the digitalization and intelligent upgrade needs of Zhongjing Hengji and can be complementary with Zhongjing Hengji’s current solutions.
