

**Datasea Wins the Second Place in the 8th Beijing-Yizhuang Innovation and Entrepreneurship Competition**

In December 2022, the "5G Messaging digital platform project" developed by Datasea won the second prize in the 8th Beijing-Yizhuang Innovation and Entrepreneurship Competition. The competition aimed to promote the integrated development of "Three Cities and One District" and attracted 538 projects from all over the country, and projects involved new generation information technology, machinery manufacturing, biomedicine, aerospace, new energy and other fields.

With 5G messaging as the carrier and emerging technologies such as Internet of Things, big data and artificial intelligence as the driving force, Datasea's 5G messaging solutions could be used in the primary, secondary and tertiary industries in rural China. The "5G Messaging digital platform project" aims to improve the level of industrial digitization in China's rural areas, accelerate the innovation of rural economy, give birth to a new digital industry in rural economy, and realize the high-quality development of China's agricultural and rural area.
